

Concerned fellow United States citizens:

We want and need a feeling of worth and accomplishment! We need to be "going in the right direction". Help change life to be positive (just for everyone). The negativity we have witnessed in our lives as dramatic as it is from the media. Fact checking must lead to being accountable. ["Tell the truth"](#) and ["This is a time for healing"](#) were both stated by President Biden. Pillars of society should not need to be stated. Pillars of Society should be exemplary to the entire population. Personal to international violence ONLY as a last resort.

"Sliding Baseline Syndrome" has otherwise made it difficult for anyone to see the change in our government and even our environment. Studying history including watching media programs allow us to see beyond our own personal perspectives. Public Library's have books beyond anyone's singular perspective. Going beyond ourselves before taking an action, especially one deemed to be illegal or against social norms is necessary. Time itself is put into a global perspective! We truly are in this world together! Overall, we can ask ourselves, "Are we getting better or worse? Are we the cause of the canary reporting the foul gas in the mine?"
